LIG-COPPER (5%)

Why is copper important for crop growth?

Helps maintain optimum levels of photosynthesis
Plays an important role in disease resistance
Enhances skin strength & quality in crops such as onions and potatoes
Required for new shoot growth in citrus crops
Essential for flowering & reproduction in many plants
Improves the colour of turf & cut flowers

The advantages of using LIG-COPPER

Chelated formulation improves uptake & plant availability
Binds to waxy onion & citrus leaves to provide maximum absorption
Very safe formulation that will not damage or burn crops
Compatible with agri-chemicals.

Application of LIG-COPPER

Citrus – Apply during spring & autumn flushes at 2-4 L/ha
Flowers - Apply every 2-3 weeks @ 2 L/ha
Onions - Apply 2 L/ha at 3 & 5 leaf & 4 L/ha at mid-growth stage
Potatoes - Apply 2 L/ha at tuber initiation & tuber set & 4 L/ha at mid-growth stage
Turf - Apply every month @ 40-50 mL/10 L water or 40-50 mL/100sqm
