LIG-MAGNESIUM (10%)

The role of magnesium in plants

- essential nutrient for optimum photosynthesis
- required for sugar & starch (potatoes) production to increase yields
- enhances the colour of many fruit crops

The benefits of using LIG-MAGNESIUM

- chelated formulation is readily absorbed & translocates quickly to developing fruits and tubers
- binds to leaves & will not wash off even under centre pivot irrigation
- enhances fruit quality
- can reduce the incidence of bunch stem necrosis in grapes
- compatible with chemical & nutrient sprays

Application of LIG-MAGNESIUM

Apples - 5 L/ha pre-flowering & 2-3 sprays after fruit set.

Citrus - 5 L/ha at Spring flush, fruit set & Autumn flush.

Potatoes - 5 L/ha at tuber set & 5-10 L/ha four weeks later.

Stonefruit - 5 L/ha 10-14 days after petal fall & repeat 2-3 weeks later.

Strawberries - 5-10 L/ha pre-flowering & every 14 days during fruiting.

Vines - 5 L/ha prior to flowering & at fruit set. For vines sensitive to bunch stem closure repeat at bunch closure & Veraison.
